Press Release

B.C. Forestry Workers are Climate Change Heroes

~Acknowledging the Women and Men Taking Action on Climate Change~

BRITISH COLUMBIA: Climate change is a concern for many people around the world. In British Columbia, there are local people throughout the province taking action on climate change through their work in forestry. A new video is being released by the Forest Enhancement Society of BC (FESBC) during National Forest Week (Sept 19 – 25). It highlights nature-based forestry solutions that people in B.C.'s forestry sector are

implementing to take action on climate change.

“Our goal was to provide an educational video to help British Columbians better understand the important role of forestry to help in the achievement of British Columbia’s and Canada’s climate change targets,” said Steve Kozuki, RPF, Executive Director of the Forest Enhancement Society of BC. “We also wanted to acknowledge and recognize people from First Nations, industry, community forests, and others who are doing innovative forestry work which is often unseen.”

When it comes to climate change, the video outlines two main approaches we can make: adapt or take action.
