Maintenance vs Rehab

Maintenance:

Performed by Road Maintenance Contractors

Current Maintenance Agreement 2019-2029

- Each contractor repairs and maintains the driving surface, completes all roadside upkeep and handles bridge and winter maintenance.
- Responsibilities within the Maintenance Agreement are broken down in to two main categories: Routine and Quantified
 - Routine:
 - Set items that are completed each year/season and rarely vary in scope
 - Quantified:
 - Activities that are planned based area needs, though some are cyclical. A portion of the overall yearly contract value is set aside for quantified activities and the Quantified Plan is approved by the local ministry staff.

Maintenance vs Rehab

Maintenance:

- Routine Activities:
 - Summer:
 - Temporary Patching, Sweeping, Debris Removal, Rest Areas, Safety Patrol, Emergency response
 - Winter:
 - Snow Removal, Traction Control, Anti-Icing, Avalanche Response
- Quantified Activities:
 - Summer:
 - Permanent pothole patching, Grading, Dust Control, Gravelling, Base Repairs, Ditching, Culvert Replacements
 - Winter
 - Majority of 'winter' specific activities are considered routine

Maintenance vs Rehab

Rehabilitation:

Ministry Driven Projects and Initiatives – Items beyond regular day to day maintenance

- District Projects – managed by our local Ops Staff
 - Gravel resurfacing
 - Cattleguard Replacements
 - Smaller scale construction projects (pullouts, rest areas)
 - Small/medium scale safety improvements (signage, lighting)
- Provincial Projects – typically managed by specialized teams
 - New road construction
 - Large scale resurfacing projects
 - Major bridge repair/replacement
 - Large culvert replacements

AREA SIDE ROADS (114.76 Lane Kms)

PROJECT NO. 26114-0000

ASPHALT RESURFACING HIGHWAY 97
PLETT RD TO EWING RD (54.3 LANE KM)

Maintenance vs Rehab

Regional District Involvement

There is certainly room for input or recommendations in both the Maintenance Contractors Quantified Plan as well as District Plan; however, planning typically happens well in advance of construction season (2-5years)

- Communicating wants/needs:
 - Preferably requests go through one point of contact. In the past that has been the CAO to the MoTI Operations Manager for the respective Service Area.
 - This allows information to flow through our internal process, allowing road area manager to focus on their daily responsibilities
 - Safety related items needing immediate attention should be directed to the Maintenance Contractor's 24/7 reporting lines
