

Building Capacity

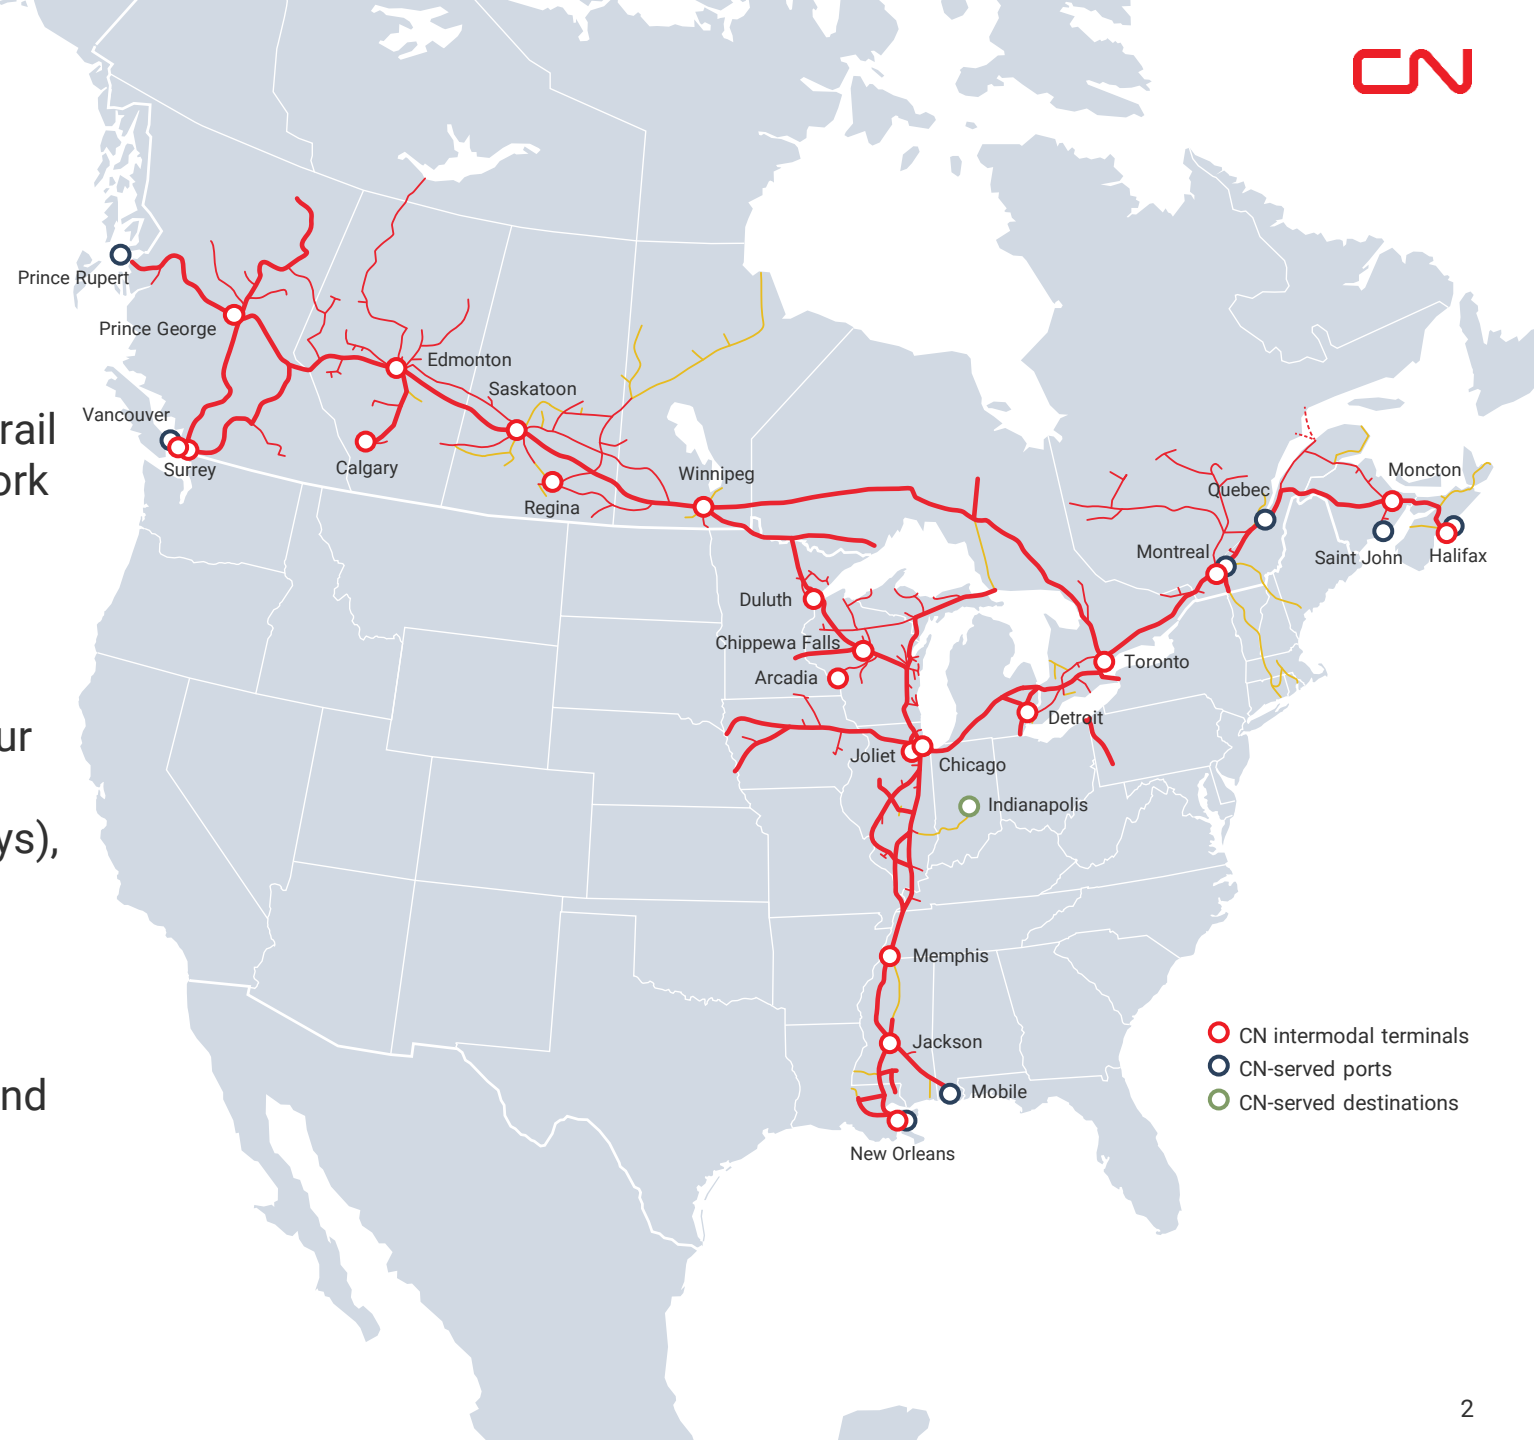

2024 Work Calendar

Building capacity for our customers

This is a regional calendar of work on the CN network. Work includes the laying of new ties and rail and will run until December 2024. CN's planned work enables us to provide safe, reliable and efficient service to meet our customers' demand. Both existing demand, and to meet the growth that our customers provide to us via their forecasts. It's important that we craft our communication with our customers to highlight the potential short-term impacts to our capacity of planned work (i.e., delays), yet focus on the benefits of and "why" we must perform this planned work.

In 2024, the Company will continue to invest in its capital program to improve the safety, efficiency and integrity of its network. These investments will enable and support the growth of the Company.

Western Region

West – March to April
